Mini Project Synopsis

Title: Smart Travel Planner – An Intelligent Trip Planning & Budget Management Website for Travelers

INTRODUCTION:

Travelers often face difficulties in planning trips, as manually researching destinations, routes, budgets, and accommodation across multiple websites is time-consuming and confusing. Most travelers depend on scattered sources such as travel blogs, review sites, and messaging groups, which are often unreliable and disorganized. Smart Travel Planner is a web-based platform that helps users plan trips efficiently by generating personalized itineraries, estimating budgets, and suggesting optimal routes, all from a single, easy-to-use interface.

OBJECTIVE:

The main objective of this mini project is to develop a user-friendly application that:

- To create an easy-to-use platform for planning trips.
- To generate personalized itineraries based on user preferences.
- To provide budget estimation and expense tracking tools.
- To recommend optimal travel routes and transport options.
- To offer real-time weather and travel updates.

METHODOLOGY:

The project follows the Agile methodology, which emphasizes iterative development and continuous feedback. The development is carried out in small iterations (sprints), each involving requirements analysis, design, development, testing, and deployment.

1.Requirement Analysis – Understanding traveler needs and problems.
2. Design – Creating a simple and user-friendly website UI.
3.Development – Building frontend and backend features.
4.Testing – Checking functionality and removing bugs.
5.Deployment – Hosting the website for user access.

FEATURES:

- User registration and secure login system.
- AI-based personalized itinerary generation.
- Budget calculator and expense tracking.
- Real-time weather and traffic updates.
- Interactive maps with route optimization.

TECHNOLOGIES USED:

Frontend: HTML, CSS, JavaScript

Backend: Firebase(Authentication & Database)

Database: Firebase Firestore

Hosting: Firebase hosting
